

Please read this document carefully!

### Product contents

- ThinkTank Tank Module ECO PCB
- ready to use power supply cable set
- motor connectors
- proportional receiver cable set

### Overview

- 1 Power supply
- 2 Fuse for turret elements
- 3 Connector for left chain motor
- 4 Connector for right chain motor
- 5 Setup mode push button
- 6 DIP-switches for selecting the tank profile
- 7 Connector for HengLong® muzzle flash, AsiaTam® recoil unit and PC Configurator
- 8 Connector for HengLong® muzzle flash
- 9 Connector for turret elements
- 10 Connector for Tamiya® recoil unit
- 11 Connector for proportional receiver (marked red)
- L Status LED

### Assembly

**HINT: the function of all connectors is printed on the back side of the PCB!**

#### Power supply

Solder the loose ends of the power supply cable to a battery connector that fits to your battery type. Use the included shrinking tube to insulate the soldered wires.

**Warning! The use of the switch and fuse is mandatory! Fire hazard when disregarded!**

#### Chain motors

Use the included plugs to connect the motors to the board. Keep the wires as short as possible. To check the correct wiring of the motors perform the following procedure:

- Jack the tank up, so that the chains can move freely.
- Attach a full charged battery to the power supply connector and switch the electronics on.
- Wait 3-4 seconds and press the pushbutton.
- The chains start to move. They change the running direction every 4 seconds. Release the button when both chains move forwards and the light chain runs faster than the left one.
- Go ahead with the installation when the motors run in described manner.

#### Turret elements

Connect the white 8-pin turret plug to the corresponding connector.

- If using the genuine HengLong® LED muzzle flash, attach it's cables (a 5-wire and a 2-wire cable) to the board.
- If using the genuine AsiaTam® turret mechanics and high voltage muzzle flash, proceed as described in the manual of the units.
- If using the genuine Tamiya® recoil unit, attach it to the corresponding connector on the board. The white cable faces the edge of the board.

#### Choosing the tank profile

The driving and function setup is determined by the position of the DIP switches. The Tank Module ECO offers seven fixed and one user defined profile

German, WW2, plastic gearboxes

German, WW2, 3:1 reduced gearbox

US, WW2, metal gearboxes

easy-to-drive tank

German, WW2, metal gearboxes

US, WW2, plastic gearboxes

T-34

User defined, setup used by the ThinkTank Configurator and PC Configurator

#### Status LED

The onboard LED shows the current status of the module

on	Tank Module is in operational state	*no connection to the sender or the transmission path between sender and receiver is disturbed. Please check the wiring and the proper function of the RC radio and receiver. If necessary check the operability of the RC equipment with a servo. **undervoltage on the CPU detected. Switch the power off for 10 seconds. If the error remains, assure that the PC Configurator USB dongle is disconnected and retry.
Short going out	Stick movement detected	
Fast blinking	No valid signal from receiver*	
Slow blinking	Faulty communication with another module	
Double blinking	Faulty CPU power supply**	

#### RC receiver

**The receiver cable MUST NOT be attached to the turret elements connector (connector #9)! This will unavoidable cause a damage of the receiver. The proportional cable is already attached to the proper red marked connector #11 on delivery. Don't remove it if you are unsure about the wiring.**

The Tank Module ECO may be connected with four, five or six channel receiver. The currently active mode of operation is recognized automatically. Please consider that the radio must be setup correctly (all mixers must be deactivated, the servo deflection must be 100% and the trimming is centered)

If the channels five and/or six are used, they must be equipped either as a slider, knob or 3-way-switch (up-off-down). Otherwise only four-channel operation is possible (although mostly all functions are also available with only four channels). The wires of unused channels may not be connected to the receiver.

The TankModule electronics provides the power supply for the receiver (BEC, stabilized 5V DC) via the red/black wires which are part of the proportional cable set.

The receiver cable has to be attached to the receiver connector on the Tank Module. The wire color pin assignment is as follows:

Ch.	Control	4-ch. mode	4+1-ch. mode	5-ch. mode	5+1-ch. mode
1	rechter Knüppel	Acceleration	Acceleration	Acceleration	Acceleration
2		Steering	Steering	Steering	Steering
3	linker Knüppel	Turret, weapon and special functions	Turret, weapon and special functions	Turret and weapon control	Turret and weapon control
4		Not connected	Not connected	Ignition and light	Ignition and light
5	3-way switch	Not connected	User defined sounds	User defined sounds	User defined sounds
6	3-way switch	Not connected			

Depending on the receiver it may be necessary to adjust the channel order or swap its movement direction. Check the manual of your rc gear for details.

### Turret, weapon and special functions using 4-channels mode

This mode is active if the blue wire of the receiver cable isn't attached to the receiver. The turret, weapon and special functions are controlled solely by the left stick of the radio.

Left stick (channels 3 and 4)	
↑ Lift the main gun (half deflection)	↑ Shot (maximum deflection)
↓ Lower the main gun (half deflection)	↓ Machine gun (maximum deflection)
→ Rotate turret right	↵ Main light on/off
← Rotate turret left	↶ Ignition (requires ThinkTank Blaster)

### Turret, weapon and special functions using 5-channels mode

This mode is active if the blue wire of the receiver cable is attached to the receiver. The turret and weapon functions are controlled by the left stick of the radio, ignition and light is mapped to the 3-way switch connected to channel 5 of the radio.

Left stick (channels 3 and 4)	Switch (channel 5)
↑ Lift the main gun (half deflection)	↑ Ignition (requires TTank Blaster)
↓ Lower the main gun (half deflection)	↓ Main light on/off
→ Rotate turret right	
← Rotate turret left	

### User defined sounds

If a ThinkTank Blaster is connected to the TankModule ECO, up to two user defined sounds may be activated optionally by the user. To use this feature, the violet wire of the receiver cable has to be attached to the 6<sup>th</sup> channel of the receiver. The samples are activated by switching the corresponding control in the radio to upper most (user sample 1) or lower most (user sample 2) position. The playback may be aborted by moving the switch in the opposite direction.

### Under voltage protection

The TankModule features an under voltage protection to protect the batteries from deep discharge. On delivery the threshold voltage is set to 6 volts for 7.2V NiMH/NiCd batteries. If the voltage drops below 6 volts, the tank stops and the main light starts to blink. In this case replace or recharge the battery.

### Fuse for turret elements

The element #2 on the PCB is a safety fuse for the turret motors. The fuse blows if the total current of the turret motors exceeds 2 amps which never happens under normal conditions. In this case no turret function is given (turret rotation, elevation, shot) and all lights are off. Check the wiring for shortcuts and the mechanics for blockages. Replace the damaged fuse with a new one. The fuses are available as spare parts in our shop.

### Configuration and update

An optionally available USB cable, the PC Configurator allows a very detailed configuration and setup of the Tank Module. To run the configuration download and install the PC Configurator Software from our web site, attach the USB cable and power up the Tank Module.

If a new firmware version for the Tank Module is released, it may also be uploaded with the PC Configurator. To activate the update process download and install the current version of the PC Configurator Software, attach the USB cable, press and hold the pushbutton on the Tank Module and switch on the power. The LED on the Tank Module blinks exactly 3 times. Follow the directions shown by the PC Configurator Software.

Nicht geeignet für Kinder unter 14 Jahren.

Not suitable for Children under 14 years.

Ne convient pas pour des enfants de moins de 14 ans. Niet geschikt voor kinderen onder de 14 jaar.
